Keywords: Program Application

Abstract:

The use of computers as a tool to solve human problems is felt more and more increasing. This is supported by the emergence of a programming language that supports OOP techniques (Object Oriented Programming). With the OOP techniques will work to make the program easier than ever before. Examples of programming languages that have supported this facility from Microsoft Visual Basic.

In order to comply with our requests and needs of programmers, Microsoft continues to update this programming language. At the time of writing the final version of Visual Basic is Microsoft Visual Basic version 6.0.

In this writing, the author uses the Microsoft Visual Basic version 6.0 to create an application program for individuals.
